

Estimated investors:

During the past 15 years and being knowledgeable of how the markets evolve, the team of IMG works continuously to incorporate daily a greater value to all professional activities carried out by the company. Thereby strengthening our operation and commercial presence in strategic countries for the investor.

It is a pleasure for me to introduce one of the most important investment projects at international level: "IMG INTERNATIONAL INVESTMENTS". Where you will find complete and detailed information of the most important aspects that constitute the most wide variety of real estate assets that are part of the project; management reports, technical data and feasibility studies clearly guaranteed all the investment process, as the forecasts for profitability is expected to be achieved from the FIRST YEAR.

We know the evolution of the laws, so we can say that the real estate assets that comprise this project is in the emerging international markets that currently exist.

So I'd like to convey that we are dealing with one of the best moments to lead investment projects. There are daily news of economic growth on the most important International Organizations according to the European Central Bank, something that has exceeded all expectation in the real estate market.

To succeed in this project, we are looking for partners - investors to participate in the project. For the confidence of the investor we provide the best guarantees. Transparency in our management allows us to immerse ourselves next to the investor participating with own capital for purposes of management and administration. Offering in that way our "know how" and "know who". Showing without any doubt the confidence and transparency that we have deposited in IMG INTERNATIONAL INVESTMENTS

The success in this kind of projects depends directly on the control in the organization and management. In this case, we are interested not only in the investment, even we provide the experience and knowledge needed by our professional team to offer a "TurnKey" investment project. Our integral management of services allow us to follow up the project from beginning to end; marketing, maintenance, consulting executive, management of properties etc.

However, knowing that today the best platform for control and marketing of the assets that form these markets is the professional and exhaustive work that is made by the right approach to online marketing, our "In-House" innovative Research & Development Department" (R&D) generating an absolute optimization between the internal and external communication. The investor will have enough comfort and confidence to have with him an experienced "associated-partner" who can ensure that project is directed toward a common profitability.

In short, I would like to convey in a sincere way to you to extend the confidence in us and I would be happy to share with you this project.

I would like to invite you through the next presentation to know directly all the elements and conditions that make up the project.

Yours sincerely,

Benalmadena, Malaga (Spain), 14 June 2015

Ali Elouail Essadiki
